

Amendments to the Abstract

Please replace the Abstract with the following amended Abstract, a clean copy of which is attached at Appendix A:

A process is provided where at least one main face of an optical lens is subjected to a corona discharge or atmospheric plasma treatment. The optical lens is dipped in a curable coating composition to deposit a layer of the curable coating composition on said main face, and is then cured. [[d]]During the whole process, the optical lens is carried by a same lens holder so that the ~~said lens face~~ face is freely accessible and without necessitating manual handling of the lens.
